

Spindle repair

+ Effective. + Cost-efficient. + Top quality.

DER SPINDELDOCTOR 
EINE DIENSTLEISTUNG DER EGIN-HEINISCH GMBH & CO KG

Der Spindeldoctor solves your spindle problems

A working spindle is the beating heart of your machine. We are here to help, regardless of the design of your spindle or type of problem.

Der Spindeldoctor works independent of manufacturers and repairs all types of spindles under a 2-shift system.

For us there are no insurmountable problems, only individual challenges.

The production of our own precision assemblies in-house is a further guarantee of extremely quick Spindeldoctor service.

Our work is characterised by customer orientation, efficiency and value for money.

Your wishes are our focus and form the basis of all our actions.

Why go to the Spindeldoctor?

- + Repairs according to manufacturer quality
- + Repairs possible within 5 working days
- + 2-shift system for working on your spindle
- + Over 999 spindle repairs a year
- + Many replacement parts available from stock
- + Disassembly and installation service with our own trained technicians

Individual spindle service

Your machine tools can soon come to a standstill because of spindle damage as a result of a collision or lack of maintenance. It doesn't have to be that way!

We at Spindeldoctor see ourselves as emergency doctors for your spindles.

Thanks to our 24-hour collection service and our own service technicians, we can get to you and take your spindle to our workshop in no time at all.

As a basis for successful repair, we start with analysing the reason for failure. Our standard documentation includes a VISOR report at the end of disassembly and incoming inspection.

Then we can either supply you with a replacement spindle or repair the existing one.

Using extreme-load bearings and spring loaded systems, we can optimise the expected service life of your spindles. In many cases we are able to recognise and remedy construction faults.

Leave you spindle problems in the safe hands of the specialist installers at the Spindeldoctor.

All you need to do is call - we'll take care of the rest.

We know these
types of spindle
like the back of our hand:

- + *Motor spindles*
- + *Main machine spindles*
- + *Compressed air spindles*
- + *High frequency spindles*
- + *Special application spindles*
- + *Wood processing spindles*
- + *Belt spindles*
- + *Milling spindles*
- + *Grinding spindles*
- + *Lathe spindles*

Your spindle problems are our job

SPINDLES ARE INDIVIDUAL

More than 100 different spindle manufacturers and well over 1000 types of spindle make our job complicated but interesting. The interplay between the spindle and the machine is the connection that needs to be understood. It's our daily challenge.

The disassembly of the spindle by our technicians is followed by its speedy transfer into our factory. Generally the initial inspection is completed within 48 hours of occurrence of the spindle damage. We begin reassembly a maximum of three working days later. The process is of course monitored by a quality manager. Your spindle is ready for use after a test run under machine conditions.

In other words:
we understand spindles!

Comprehensive spindle repair

Spindle repair at the Spindeldoctor is comprehensive and always service-oriented. We usually install higher quality bearings than before and always look at the complete spindle and its unique characteristics, even in the case of small "routine ops".

You get information on: the bearing seats, the clamping system, the coaxiality of the spindle shaft, the interface, the seat of the clamping system, the rotary joint and the parallel relations between the spindle parts.

Alongside precise measurement, our inclusive services usually include sharpening of the interface.

What does the Spindeldoctor offer?

- + Repair of all types of spindles
- + Repairs to manufacturer quality
- + Our own production and grinding shop
- + Our own transport service
- + Our own service
- + Up to 18 months' guarantee

Successfully: Operation complete

When you work with the Spindeldoctor, any problem can be solved. We analyse even total write-offs, and we often save the spindle.

Our process works thanks to our years of experience and attention to detail. We disassemble all spindles entirely and

are perfectly acquainted with the function of each and every individual component.

After a successful spindle op come assembly and numerous test runs.

We aren't satisfied until the spindle works exactly according to your wishes.

Modification instead of repair

We will also be happy to modify your working spindles. We can increase performance and adapt the function of your spindles to your exact needs and wishes.

We work closely with you to find a tailored solution together.

What makes the Spindeldoctor unique?

Comprehensive quality assurance with:

- + Spindle commissioning
- + Run-in cycles for every spindle
- + Spindle balancing
- + Long-term operation
- + Roller bearing analysis
- + Temperature profiles
- + Electrical, functional and geometric inspection

Detailed documentation of all tests for the customer
